

Business-Level Requirements

In order for the South Liberty Public Library to improve their business processes the new system must allow librarians to manage library materials and fines, enable patrons and the public to search library materials and manage digital patron accounts. Ultimately, the South Liberty Public Library's goal is to have a system in place that stores data pertaining to library materials and patrons, makes it easier for librarians to complete their daily activities and gives patrons and the public a more efficient and user-friendly way to search all materials that the library has to offer.
