

Scheduling-

Upon our review of the user stories we estimated that the total hours required for the project is 573, accounting for velocity. Considering there are three developers on our team, and an iteration is composed of twenty working days, there are 480 hours available per iteration for scheduling tasks. Since our projected time estimate is greater than the 480 hours available, this project will be composed of two iterations.

The target completion date is: **Tuesday, December 3, 2013.**

Schedule:

Iteration	User Story Priorities	Time (Hours)	Date
1	1-29	480	November 26, 2013
2	29-42	93	December 3, 2013
