Vision

We are creating a system for South Liberty Public Library's that will provide the Super Librarian, Librarians, patrons, and public users with a technological advantage that will enable them more efficiently carry out their processes. By creating the information system called *Modernize* materials will be tracked more closely, and also will have the capability of being quickly searched, wish listed, renewed, reserved, checked in, or checked out by using a computer versus the old card catalog system South Liberty is currently using. Our product will allow the efficiency of all users to increase through the ease of technology. This supports the Libraries goal to keeping customers happy as well as the Super Librarians operation running smoothly.
